

Instituto Organizacionista Named an OpenAI Select Partner

Ribeirão Preto, São Paulo – August 8, 2026

Instituto Organizacionista, an organization dedicated to mentorship, education, software engineering, and artificial intelligence, today announced that it has been named an **OpenAI Select Partner** within the OpenAI Partner Network.

The OpenAI Partner Network is a global program that brings together organizations with proven capabilities to build, deploy, and scale AI solutions using OpenAI's technologies. The program connects technical partners with resources, enablement, and collaboration to accelerate the responsible adoption of AI across companies and organizations worldwide.

As an OpenAI Select Partner, **Instituto Organizacionista** will continue working alongside OpenAI to turn knowledge into practical innovation, helping people and companies develop AI applications that generate real, sustainable, and measurable impact. This work will help organizations get more useful work from every token and stronger performance per dollar with GPT-5.6, while using ChatGPT Work to turn ambitious goals into finished work.

Statement from Founder Milton Bolonha Neto

"Since I was very young, I've believed that changing the world requires building today the future we can envision. I've always believed it's worth dedicating time, effort, and even personal sacrifice to create knowledge, technology, and opportunities capable of improving people's lives.

Becoming an OpenAI Select Partner represents an important milestone in this journey I've been building for so many years. More than a technical recognition, it's confirmation that we're on the right path: developing people, building technology, and creating solutions that expand human potential through artificial intelligence.

AI drives people's dreams forward. It expands what we're capable of building. Our mission is to prepare the next generation of professionals to build that future with responsibility, creativity, and purpose."

— Milton Bolonha Neto Founder & CEO, **Instituto Organizacionista**

What We Do

Instituto Organizacionista empowers companies, professionals, and students to learn, build, and deploy AI-based solutions.

We develop educational platforms, enterprise applications, and automation solutions using OpenAI's technologies from day one of development. Our experience includes platforms based on Retrieval-Augmented Generation (RAG), semantic search, process automation, intelligent content generation, decision-support systems, and AI-driven applications across a range of sectors.

More than building software, we believe AI's greatest impact lies in developing people capable of creating new solutions. That's why our entire teaching methodology is built on real-world learning projects.

Through the I/O Career Mentorship program, we guide students, developers, and software engineers through their professional growth, preparing them to design and build modern applications using artificial intelligence responsibly and as an integral part of the development process.

Our I/O Young Apprentice Program was created to train the next generation of technology professionals. From day one, young participants develop design and finishing-art skills and build real applications alongside educators, software engineers, and technology specialists.

Artificial intelligence is woven into our learning process from the very start, allowing students to use OpenAI's tools to support research, programming, documentation, software architecture, and problem-solving.

We teach more than how to use AI. We teach people to think and build the future — and for that, we rely on AI's support at every stage of the process.

Looking Ahead

In the coming years, **Instituto Organizacionista** will expand its reach through partnerships with regional companies to grow the I/O Young Apprentice Program, creating first-job opportunities for young people interested in technology.

Our goal is to connect education and the job market, offering training in design, finishing art, software development, AI fundamentals, and modern application development — preparing professionals capable of bringing AI into a wide range of organizations.

We believe digital transformation depends not only on new tools, but above all on people prepared to use them ethically, responsibly, and with innovation.

As an OpenAI Select Partner, we will continue investing in education, applied research, and the development of AI-driven platforms, helping companies and professionals turn ideas into real solutions and contributing to forming a new generation of engineers capable of building AI-powered applications.
